Average			

1 = Disagree 2 = Neutral 3 = Agree

EVERY student said they enjoyed the unit and learned a lot. All but two said they were more excited about science.

d. Unanticipated Problems/Successes

The only real problem was the genetic sequences that were presented. The 7th graders were able to see matches but really did not understand what the sequence really was.

e. Adaptations/Changes Made to Final Lesson Draft

I am not sure what I can do to change the genetic sequence portion of the unit. I think I will just try to use it again and just focus on the matches and not on what a sequence is as much. Other than that, I would not make any changes.

f. Recommendations for Future Users

The assessment is not really that hard. I might work at redoing that to make it more comprehensive to the whole unit we are working on.

6. Final Version of the Lesson
